Job Description Provided by HR

FICTIONAL / TEST DATA / NOT VALID FOR ANY REAL IMMIGRATION FILING

Position

Software Engineer I

Department

Engineering - Platform Integrations Team

Reporting Manager

Priya Shah, Director of Engineering

Job Summary

The Software Engineer I will help design, develop, test, and maintain backend services and integration tools for Northstar Data Systems, Inc.'s enterprise data platform. The role supports API integrations, data validation workflows, application reliability, and internal engineering tools.

Duties

- Develop backend services using Python, TypeScript, and SQL.
- Build and maintain API integrations used to connect customer systems to the Northstar data platform.
- Write unit tests, integration tests, and documentation for internal APIs.
- Assist with debugging, performance monitoring, and production issue triage.
- Collaborate with senior engineers, product managers, and implementation teams to convert product requirements into technical tasks.
- Participate in code reviews and sprint planning.
- Maintain internal tools used by implementation and customer success teams.
- Support data validation and transformation logic for customer reporting workflows.

Approximate Time Allocation

- Backend service development: 35%
- API integration development and maintenance: 25%
- Testing, debugging, and documentation: 20%
- Cross-functional product and engineering collaboration: 10%

- Internal tools and platform support: 10%

Minimum Requirements

Bachelor's degree in Computer Science, Software Engineering, Computer Engineering, Information Systems, or a closely related technical field.

Preferred Requirements

- Academic or professional experience with Python
- Academic or professional experience with SQL
- Familiarity with cloud platforms, APIs, or distributed systems
- Strong written and verbal communication skills
